Dear Zach and Janaína

Verra is returning the VCS registration and CCB validation approval request made on behalf of Project ID 3324, IPOÁ REDD+ PROJECT.

The project status has been updated to "Under development (Public comment period closed)" in the VCS Program and "Under validation and verification (Public comment period closed)" in the CCB Program.

Verra has deemed that TÜV SÜD has not appropriately assessed the project's conformance with the VCS and CCB Program rules. Verra identified significant and pervasive non-conformances to the Program rules that reasonably impede an efficient review, about which we have shared further details with you separately.

Next steps

If Carbonext wishes to pursue this request again, TÜV SÜD is requested to address the issues identified. Once this is done, Carbonext may submit a new project request as follows:

1. Re-initiate the CCB validation and/or verification public comment periods and pay the associated fee(s).
2. Upload the revised project documents and submit a new project request via the Verra Registry
3. Pay the VCS *registration review fee*

Where a new project request is submitted to Verra within 180 days after the date of this letter, the project proponent may apply the versions of the VCS Program documents, methodologies, and templates used in the original request.

If a new request is not submitted within one year of the date of this letter, the project's status will be changed to *inactive*.

For your reference, the procedure for returning project requests is described in the VCS *Registration and Issuance Process*, v5.0, Section 4.3.8-11.

This letter will be posted publicly on the Verra Registry.

Sincerely,
Verra
